

Even more security with SolarMax inverters

5-year standard warranty

SolarMax provides a standard warranty of five years on all inverters and assumes all material costs, travel expenses and labour costs within this time period.

The only pre-requisite for central inverters is the registration of the devices on our website (www.solarmax.com/reg) within the first three months after installation.

Warranty extensions now with even better conditions

For even better investment protection and plannable security beyond the standard warranty period, SolarMax also offer extended warranties. These are now available with even more attractive conditions!

Depending on the product, inverters can be guaranteed for a total period of up to 25 years. For central inverters, SolarMax also offers a loss of yield guarantee in the form of the MaxControl comprehensive package.

The terms and conditions are explained in detail on the rear.
